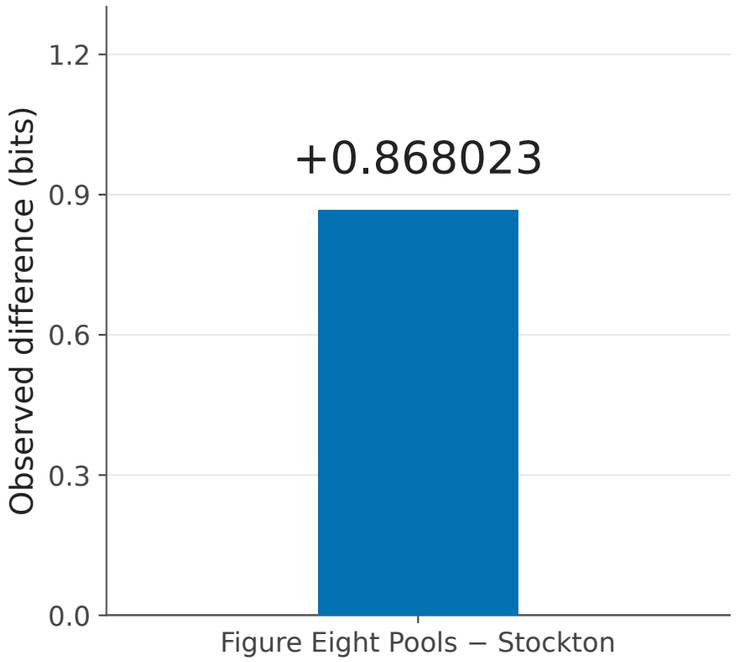
Observed offshore–nearshore information contrasts

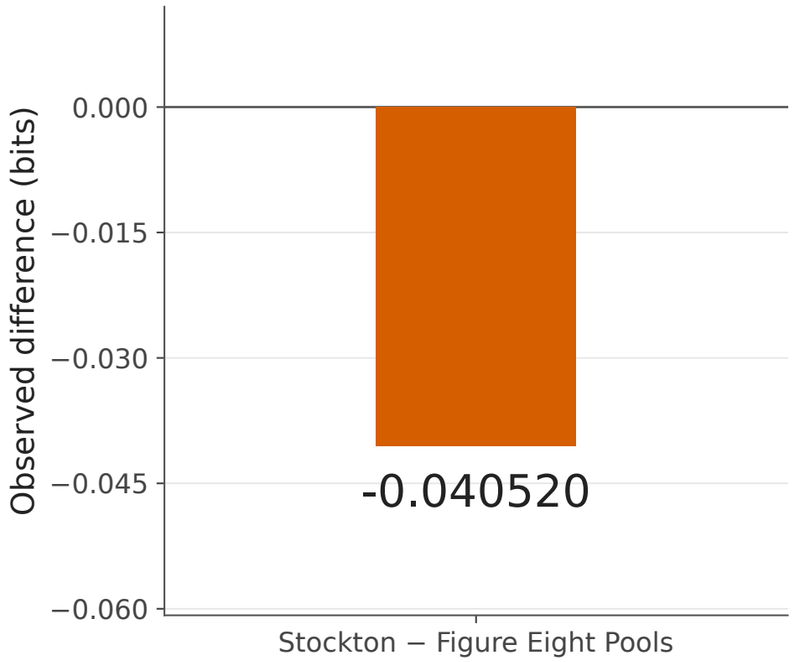
Between-site differences in the original zero-lag estimates · descriptive, not inferential

A Height MI
$I(H_o; H_n)$



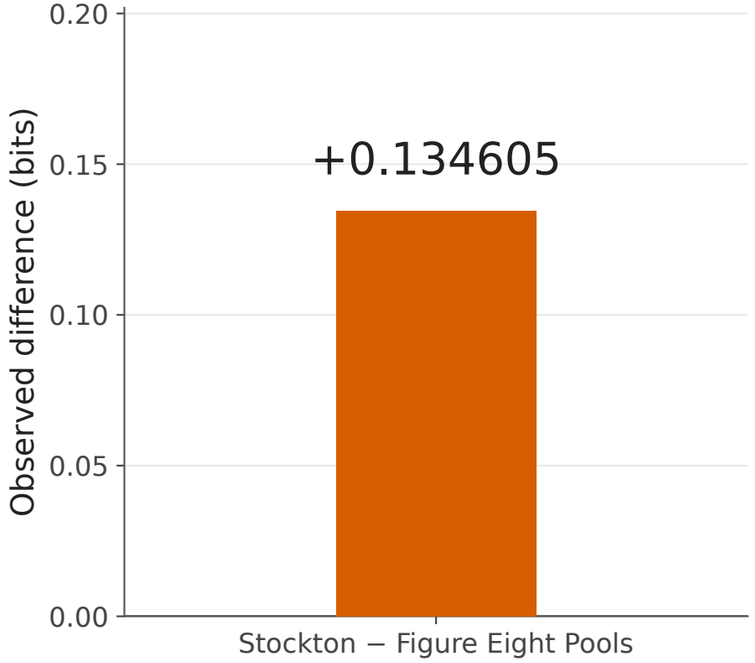
FEP: 1.547940 bits
Stockton: 0.679918 bits

B Peak-period CMI
$I(T_{p,o}; H_n \mid H_o)$



FEP: 0.030538 bits
Stockton: -0.009982 bits

C Peak-direction CMI
$I((D_x, D_y); H_n \mid H_o)$



FEP: 0.097002 bits
Stockton: 0.231608 bits

Figure Eight Pools: Port Kembla / Wollongong offshore → Figure Eight Pools · N = 6,867

Stockton: Sydney offshore → Stockton · N = 10,522. Independent panel scales; no validated between-site test.
